22-23
Birth
Anniversary
D.R.Kaprekar

Ganitanand Dattatreya Ramchandra Kaprekar was born on 17th January 1905 at Dahanu near Mumbai.

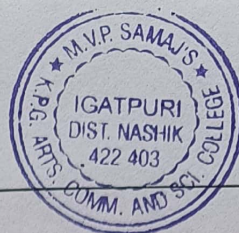

Kaprekar was a world renowned mathematician living in Deolali(Nashik).

Kaprekar completed his secondary school education in Thane and continued his education at Fergusson College, Pune. In 1927, he was hired by Wrangler R.P. Paranjape received the Mathematical Award.

He entered the University of Mumbai for further studies and in 1929 received his degree in. With no formal postgraduate training, he was a teacher in Nashik, Maharashtra, India throughout his career (1930-1962).

He wrote extensively on topics such as recurring decimals, magic squares, and special integers.

Working largely alone, Kaprekar explored many of the results of number theory and described the various properties of numbers. In addition to Kaprekar's constants and the Kaprekar numbers in his name, he also described the number or Deolali number, Harshad number and Demlo number. He also built a special kind of magic square associated with Copernicus Magic Square. Initially, his ideas were not taken seriously by Indian mathematicians and their results were widely published in low-level mathematical journals or privately, but Martin Gardner published his March 1975 Mathematical Games for Scientific American. Today his name is well known and many other mathematicians have studied the properties he discovered.
